

Drum Clamp

Drum Clamp - Forklifts are meant to handle moving, lifting and storing pallets. For facilities which deal with items in drums, you have to utilize an attachment to be able to move, lift and store them. There are various drum forklift accessories that you could get for all of your drum lifting requirements. These attachments are particularly designed in order to handle drum containers - therefore there is no risk of damage to the product or drum container whenever they are moved, lifted or stored.

Drum Positioner And Grab

The drum positioner is accessible in three and four tine designs. They are utilized for the unloading and loading of drums off drum stands, racks and vehicles. This attachment is totally automatic, therefore allowing the person operating it to operate all from the comfort of the lift truck seat. Able to move large and extra large plastic drums, steel, its capacity is 210 liters. This particular attachment is utilized for drum pyramid stacking.

The drum grab is fork mounted and is designed with the sole objective of handling steel drums which have rolling hoops. Even if the purpose for the design was to handle steel drums with rolling hoops, the drum grab can accommodate the transporting of large and extra large plastic drums. Drum capacity maximum is 210 liters for steel drums with rolling hoops and 220 liters for plastic drums.

The Rotator

The drum rotator is a forklift attachment that mounts on to the blades themselves. The objective of the drum rotator is to be able to lift the drum and turn it upside down. The drum fits in to the rotator utilizing a steel clamp which fits over the center of the drum. The rotation is performed by either a crank handle or a continuous loop chain. The crank handle is meant for operations that take place below shoulder level. For operations that should happen over shoulder level, the continual circle chain will be utilized.

The drum tines are simple fork or carriage mounted accessories. They are designed for unstacking and stacking 210-liter steel drums. Stacking involves nothing elaborate, just easy horizontal placement of the drums. The carriage-mounted enhancements decrease the load center of the drums.

Automatic Tongs

Drum tongs are available in automatic and semi-automatic versions. They are used in the open topped or tight head steel drum kinds. The drum forceps can be connected in a couple of ways to the forklift. One method is to attach them under a fork-mounted hook. Another way is to connect them to a fork-mounted jib or a carriage mounted jib. Both the automatic and semi-automatic have a drum capacity of 210 liters. With the automatic, there is no need for the individual operating it to ever leave the seat of the forklift.

Rim Grip Handler

The Rip Grip Drum Handler is the perfect option for forklift attachments, whenever there is a necessity to store drums with limited space obtainable. This particular attachment could be used on either 120L and 210L drums. The Rim Grip Handler works by utilizing metal jaws to be able to grab the edge of the drum. It picks the drum up and puts it down without needing any room between the drums. The average model utilized in the industry is a zinc-plated handler, though, this particular accessory is obtainable in stainless steel for the food and drink industry.
